The issues behind unit concepts are certainly not new to archaeology. For instance, the notion of defining artifact style and function along the lines of drift and selection, validity and reliability, and the differences between analytic and synthetic units can be related to Dunnell's work on scientific archaeology, begun almost 30 years ago.

The most widely used measurement unit for turbidity is the Formazin Turbidity Unit (FTU). ISO refers to its units as FNU (Formazin Nephelometric Units). ISO 7027 provides the method in water quality for the determination of turbidity. It is used to determine the concentration of suspended particles in a sample of water by measuring the incident light scattered at right angles from the sample.
